# Supply Chain Management Dashboard

Name: Gunjan Singh
Course: Data Analyst
Tools Used: Tableau, Excel

## Project Overview

This project focuses on analysing supply chain data for a fashion and beauty company using Tableau. The objective is to create an interactive dashboard that provides insights into product sales, inventory levels, supplier performance, and transportation costs.

The dashboard helps in understanding key business metrics and supports better decision-making by identifying trends, inefficiencies, and cost drivers in the supply chain.

## Dataset Description

The dataset contains information related to supply chain operations of makeup products. It includes multiple attributes such as product type, price, revenue generated, stock levels, number of products sold, supplier details, shipping information, transportation modes, and costs.

Key columns used in the analysis include:

- Product Type
- Price
- Revenue Generated
- Number of Products Sold
- Stock Levels
- Supplier Name

- Shipping Carriers
- Transportation Modes
- Costs

## Tools & Technologies

Tools & Technologies Used

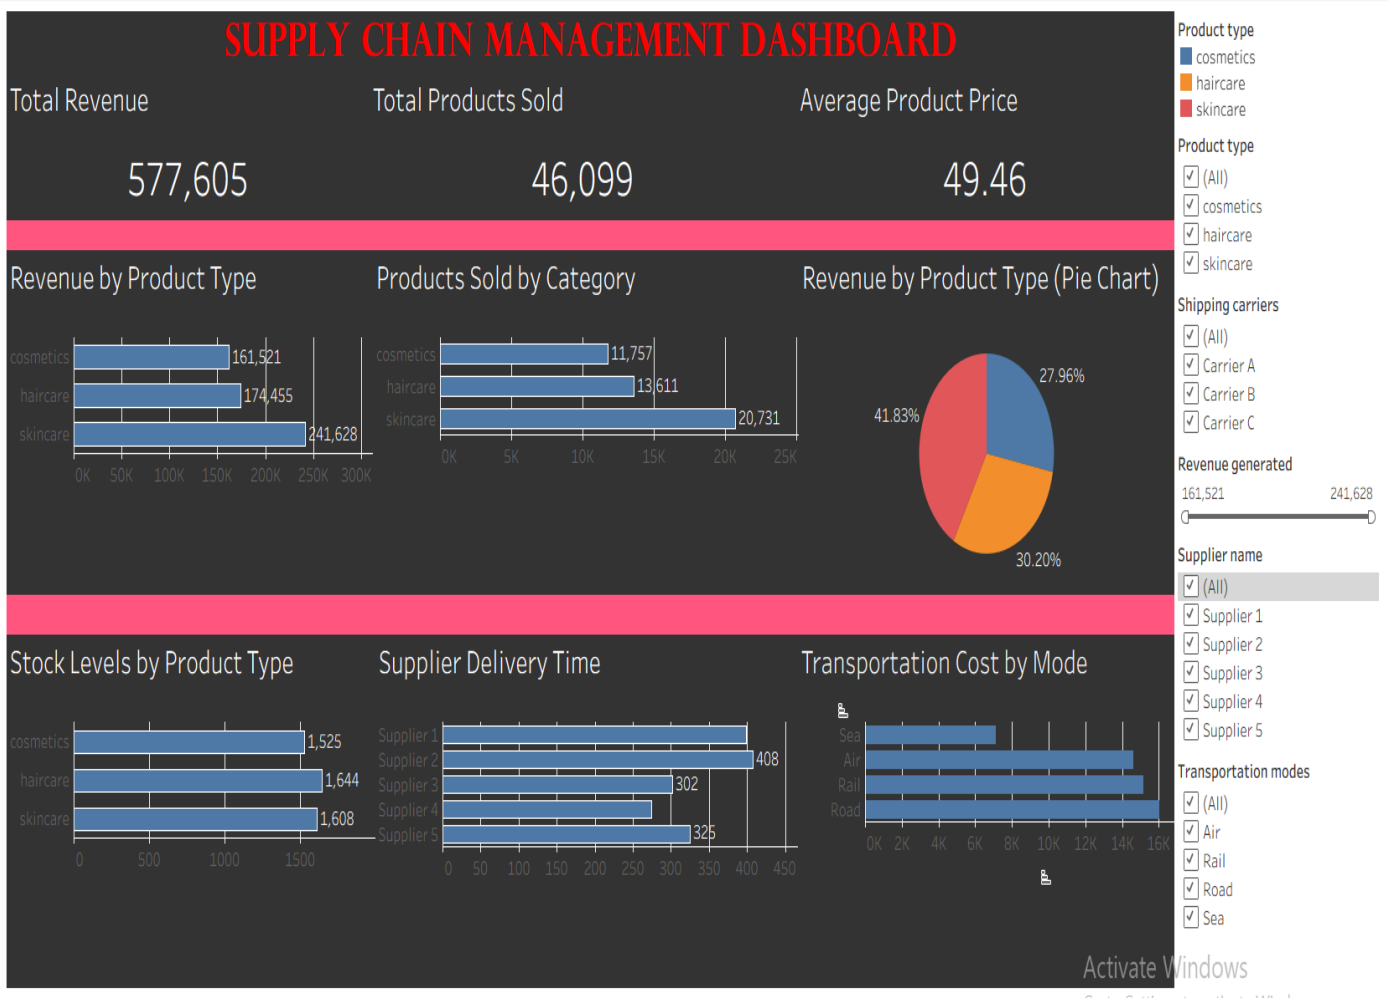
- Tableau Desktop (for dashboard creation and visualization)
- Microsoft Excel / CSV (for dataset handling)
- Data Analysis techniques for extracting insights

## Dashboard Features

The dashboard includes the following components:

- KPI Metrics:
  - Total Revenue Generated
  - Total Products Sold
  - Average Product Price
- Visualizations:
  - Revenue by Product Type (Pie Chart)
  - Products Sold by Category (Bar Chart)
  - Stock Levels by Product Type
  - Supplier Delivery Time
  - Transportation Cost by Mode
- Filters:
  - Product Type
  - Supplier Name
  - Transportation Modes
  - Shipping Carriers

- These features make the dashboard interactive and user-friendly.



## Key Insights

- Skincare products generate the highest revenue among all product categories.
- Haircare products are the second highest in terms of sales.
- Stock levels for skincare products are higher compared to other categories.
- Supplier delivery time varies across suppliers, indicating efficiency differences.

- Road transportation has the highest logistics cost among all transportation modes.

## Conclusion

The Supply Chain Management Dashboard provides valuable insights into sales performance, inventory levels, supplier efficiency, and transportation costs. The analysis helps identify high-demand products, evaluate supplier performance, and understand cost distribution across transportation modes.

This dashboard can assist businesses in making data-driven decisions and optimizing their supply chain operations.
